

Rugged and reliable. That's what they expect. That's what we deliver.

dB Control TWT Amplifiers and Microwave Power Modules for mission-critical performance

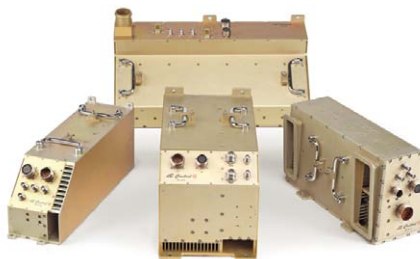

dB Control wishes to thank Staff Sergeant Melissa Davis-Martin – niece of dB Control CEO Joseph Hajduk – and all U.S. Military Personnel serving in Iraq and around the world.

Any spec. Any platform. Any time. dB Control delivers.

When split-second decisions are made under adverse conditions, a failure of the countermeasure system can jeopardize missions and cost lives. Reliable performance of the transmitter in an ECM system cannot be compromised. dB Control keeps you in control by building high performance into every product we deliver.

dB Control provides production-quantity Traveling Wave Tube (TWT) Amplifiers, Microwave Power Modules (MPMs), fully integrated transmitters and power

supplies for ground-based, shipborne and high-altitude military manned and unmanned aircraft platforms. And our modular designs enable us to quickly configure custom products to your exact specifications.

We design and manufacture rugged, reliable microwave power systems for the U.S. Armed Forces and key OEMs – customers that demand performance. If your expectations are just as high, contact us today.
